

Food Waste Recycling

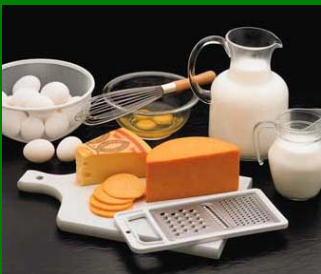

FOOD WASTE

Until now, large generators of food waste have had few to no alternate options for disposal other than including it with their normal daily refuse. Today, Land and Lakes Company offers the Chicagoland-area the green alternative of Food Waste Recycling to those who are willing to separate food waste from their current waste stream.

FOOD WASTE RECYCLING

Progressive thinking and technical expertise led Land and Lakes to become the first environmental service company in Illinois to receive landscape waste recycling permits. Since this time, we have become the state's largest landscape waste compost operator in terms of volume of material received and customers served.

In December 2009, Land and Lakes Company was granted the first permit to operate a food waste recycling center at one of its current composting facilities in Chicago. By mixing a percentage of food waste in with our current yardwaste compost, Land and Lakes produces a highly organic soil amendment for use by landscapers and gardeners.

Saturday - Sunday CLOSED

LOCATION: 2000 E. 122nd Street
Chicago, IL 60633

PRICING: Call 847-825-5000

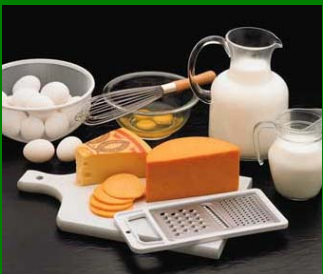

COMPOST PRODUCT

Land and Lakes compost is used for beautification of city parks and highway vegetation projects, as well as in gardens for potting. An outstanding soil amendment, compost reduces run-off and evaporation, helps control erosion, assists in the reduction of weeds, enhances plant life and seed growth, and improves the overall appearance of landscaping.

Each year, Land and Lakes processes hundreds of thousands of cubic yards of landscape waste waste into a premium finished compost product, making our company the largest composter in the state.

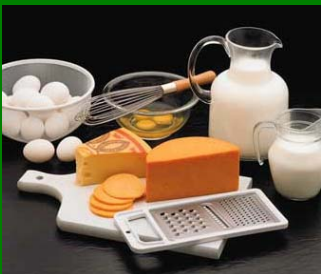

OPPORTUNITY

Land and Lakes is reaching out to local producers of food waste to join us in our new Food Waste Recycling initiative. By simply separating your food waste from your everyday refuse, your business will be able to portray itself as an environmentally conscience participant in the green movement. Become an industry leader and project your company as a pioneer of environmentally friendly practices while earning credit for joining this initiative from its inception. Your participation can help turn everyday food waste into something more than used up landfill space.

THE NEXT STEP

If you generate food waste and are interested in learning if Food Waste Recycling is right for you, please contact us. We would be happy to provide you with more information whether it be over a casual meeting in your office, over the phone, or via email.
